
HANGING YOUR WINDSINGER CHIMES

Suggested Precautions

Your Woodstock Windsinger Chime has been made from very thick-walled aluminum tubes. The extra thickness helps to give your chime its exceptional sound quality, but it also makes it **very heavy**. The static weights of the individual chimes in this series are listed below. You should also take into consideration the stress added due to the motion of the chime when it's playing.

Please take great care in where you hang the chime, the hardware used, and the strength of the structure from which you hang it. If you have any doubts, we suggest you contact a professional who can evaluate your specific suspension requirements.

Chimes of Athena	4.5 lbs.
Chimes of Orpheus	7 lbs.
Chimes of Apollo	18.5 lbs.
Chimes of King David	35 lbs.

* **A SPECIAL NOTE TO RETAILERS:** Woodstock Windsinger Chimes should only be hung from the top grid of the Signature Collection/ Windsinger Display (WSCD/W). These chimes are too heavy for any other Woodstock Chimes display systems. Under no circumstances should these chimes be hung from hangers attached to the upright supports of any Woodstock display, as this could upset the display.
